| Project Name | Project -<br><br>AI system that verifies user identities based on their online behavior patterns, adding an extra layer of security. |
| Maximum Marks | 4 Marks |

## Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:
 Find the best tech solution to solve existing business problems.
 Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
 Define features, development phases, and solution requirements.
 Provide specification
